

A WATCHDOG  
ALWAYS CONNECTED

DAS  
BOX

## DOES YOUR PATIENTS' SECURITY REALLY MATTER TO YOU?

DASBOX is a data acquisition system which can send you alerts and monthly activity reports in order to respect OPQ's norms.

### Avoid stock losses!

A DASBOX placed in your medical fridge will monitor its temperature.

### Embrace your success!

A DASBOX left near your store entrance can count the number of customers passing your door.

### Make informed decisions!

A strategically placed DASBOX in your store's aisle can help improve your sales.

### Optimize your delivery costs!

DASBOX can monitor your delivery cars in order to maintain your products cold-chain.

### Rest easy and feel safe!

DASBOX can detect movements, noise, vibration, smoke, humidity, etc.

- + Keep an eye on your boat or cabin
- + Analyze your house's air quality
- + Be warned in case of water damage or spills
- + Track delivery vehicles or goods
- + Sky is the limit!

Ginette Lehoux, a Familiprix pharmacy owner, validates her cold supply chain with DASBOX.

In June 2016, Mrs. Lehoux was in France for her holidays. While away, her pharmacy's delivery car broke down. "In a situation like this, our priority is to properly manage and respect the medication's cold supply chain" claim Mrs. Lehoux.

*"With its 24/7 monitoring system, I feel more secure, thanks to my DASBOX."*

### What does Ginette Lehoux think of this situation?

Even though medication transportation is done with isothermal envelopes and Ice packs, we have no clear data about the temperature status inside the envelopes during transportation. In case of a problem, the drugs might be left a few hours in a less than ideal situation for their preservation.

### According to you, what could be done to improve this situation?

At the pharmacy, it would be great to reduce the manual temperature readings and install an automatic monitoring system instead. This would allow an easier and better cold supply chain tracking. Also, getting automatically generated reports would make our life easier. Overall, securing drugs efficiency is a real challenge.

### How are pharmacists actually concerned about the cold supply chain monitoring?

We are very concerned since it's our responsibility to give our patient medications that was kept in the best preserving conditions possible. Our patients' health is important to us. They come asking us for advice, they trust us, we can't take the risk of offering them contaminated or inefficient medication that could jeopardized their health and security. Also, we have to minimize financial lost.

### What differences have you noticed since you have DASBOX in your pharmacy?

At my pharmacy, the temperature in our medical fridge is taken regularly. Two daily measures are then selected and added to a report which can be printed and kept. Of course, having a DASBOX to manage this is a relief since it monitors our fridges 24/7. It also makes me save a lot of time by producing reports automatically and by reducing human error. In our case, our fridges aren't connected to a security system like bigger pharmacies can afford to do. So DASBOX, like a watchdog, warns me if my refrigerator's temperature isn't within the normal range. These alarms allow me to make the best decision quickly in order to preserve my medication stock.
